

South Dakota HIV/AIDS Cumulative Statistics, 1985 – 2005

Residents reported infected with HIV since 1985	495
Residents currently living with HIV/AIDS	288
Male residents currently living with HIV/AIDS	206
Female residents currently living with HIV/AIDS	82
Residents reported who have been diagnosed with AIDS	293
Residents infected with HIV who have died (of all causes)	145
Residents who have been diagnosed with AIDS and have died	133
South Dakota AIDS Fatality Rate.....	45%
Out-of-state AIDS cases who have died in South Dakota	58
2004 South Dakota AIDS incidence (cases per 100,000 residents).....	1.6

United States Cumulative AIDS Statistics through December 2004

AIDS Cases Reported in the United States	918,286
AIDS Deaths Reported in the United States	529,113
AIDS Fatality Rate in the United States	58%

South Dakota Residents Reported by Gender with HIV and AIDS, 1985-2005

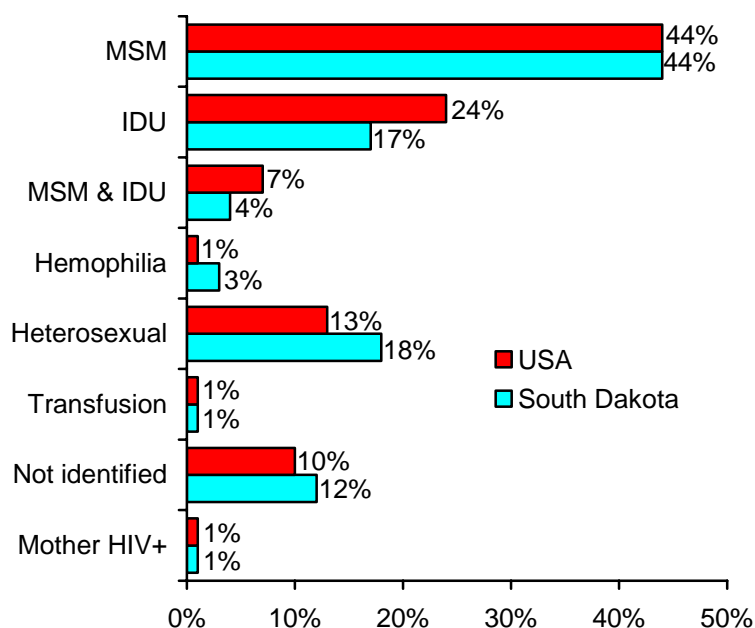

At the end of 2005, 495 SD residents had been reported as infected with HIV (389 male, 106 female) and 293 of those had also been diagnosed with AIDS. Some cases may have been reported as an HIV case in a different year than they were diagnosed with AIDS.

HIV/AIDS cases reported by race/ethnicity, sex, and age, SD, 1985-2005

Age at diagnosis	White		Native American		Black		Hispanic & other		All groups		Total
	Male	Female	Male	Female	Male	Female	Male	Female	M	F	
Under 5 yrs	2	1	1	2	0	0	1	0	4	3	7
5-12 yrs	3	0	1	0	0	0	0	0	4	0	4
13-19 yrs	10	2	0	2	2	1	1	1	13	6	19

Total	344		77		56		18		495		

HIV AIDS Cases by Exposure Category*, SD** & USA***

*MSM (men who have sex with men)

*IDU (injection drug user)

**South Dakota HIV/AIDS cases 1985-2005

***US AIDS cases through 2004

Sometimes 2 or more exposures are reported for one case.
This table is consistent with the CDC hierarchy of exposures.

South Dakotans living with HIV/AIDS (n=288)

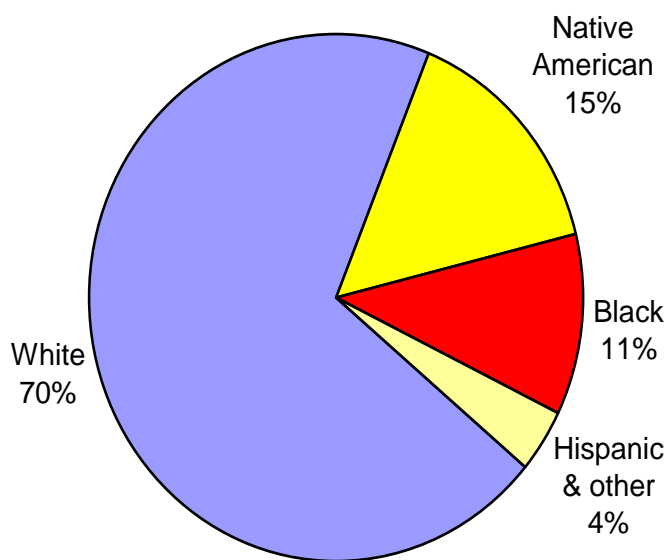

GENDER	Cases	Percent
Male	206	72%
Female	82	28%
Total	288	100%

RACE	Cases	Percent
White	187	65%
Native American	44	15%
Black	45	16%
Hispanic & Other	12	4%
Total	288	100%

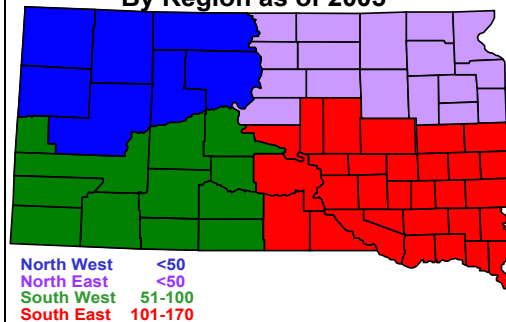

AGE	Cases	Percent
0-12 years	2	1%
13-19 years	3	1%
20-29 years	30	10%
30-39 years	82	28%
40-49 years	106	37%
50+ years	65	23%
Total	288	100%

RISK	Cases	Percent
MSM	106	37%
Injection drug use	52	18%
MSM and IDU	8	3%
Heterosexual	68	24%
Transfusion	2	1%
Hemophilia	10	3%
Mother HIV+	2	1%
No risk identified	40	13%
Total	288	100%

SD HIV/AIDS Cases by Race/Ethnicity, 1985- 2005, (n = 495)

South Dakotans living with HIV/AIDS: By Region as of 2005

South Dakota Residents Reported with Associated Diseases, 1994-2005

Diseases	Year	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005

Sexually transmitted diseases (STDs) and bloodborne diseases are a reliable indicator of high-risk behavior (i.e., unprotected sexual intercourse) within populations and may increase the infectiousness of HIV.

AIDS has been a reportable disease in the U.S. and South Dakota since 1985. HIV infection without an AIDS diagnosis has been reportable in South Dakota since 1988. The tables and graphs provide information concerning South Dakota residents reported with HIV infection (non-AIDS) and AIDS.

The SD HIV/AIDS Surveillance Report is published semi-annually. Data contained in this report are provisional.

Percentages may not equal 100% due to rounding.

Questions regarding the surveillance report may be directed to Christine Olson (1-800-592-1861 or 605-773-3737). This report is available on the SD Department of Health website at www.state.sd.us/doh/disease/stats.htm or write to HIV Surveillance, 615 East 4th Street, Pierre, SD 57501. For HIV/AIDS information 24 hours a day call 1-800-342-2437 or see www.cdc.gov/nchstp/hiv_aids/dhap.htm.
